Alperen Baltacı

GAMEPLAY & SOFTWARE DEVELOPER

Warsaw, Poland | alperenbaltaci94@gmail.com | +48 506 328 698
alperenbaltaci.netlify.app | github.com/thetruth2003 | LinkedIn

PROFILE

Gameplay and software developer focused on Unity/C# and Unreal Engine/C++. Experienced in modular gameplay systems, developer tools and interactive applications, with leadership of a five-person indie team. Combines hands-on programming with cross-functional collaboration and a focus on maintainable code.

EXPERIENCE

Team Lead | The Truth Company *2024 - Present*

Independent game team - 5 members

- Lead a five-person team as producer, lead developer and game designer, coordinating technical development and creative direction.
- Build the game's technical foundation: gameplay systems, UI architecture, dialogue systems and event-data pipelines.

Gameplay Developer | Futuregames Projects *2024 - Present*

Collaborative game projects and game jams

- Contributed to 9+ international game and game-jam projects, implementing modular gameplay loops, tools and UI systems in Unity/C#.
- Collaborated with multidisciplinary teams through code reviews and sprint planning; contributed to games published on Futuregames' itch.io page.

Gameplay Programmer | Udo Games *Feb 2021 - Jan 2023*

Ankara, Türkiye

- Developed gameplay mechanics and custom tools for PC and mobile titles using Unity/C#.
- Built reusable quest, UI, cooldown and combat components, working with designers and artists to integrate gameplay features.
- Participated in sprint planning and maintained reusable, clearly structured gameplay code.

Full Stack Developer Intern | ARA Technology *2020 - 2022*

- Developed admin dashboards and client panels using C# and SQL; supported backend architecture for internal automation systems.
- Worked in Agile sprints with a team of 5+ developers, using Git and Trello for collaboration.

SELECTED TECHNICAL PROJECTS

Advanced Combat System | Unreal Engine, C++
Extended ALS Community with directional melee, target focus and a throwable, recallable axe.

Modular Vehicle Builder | Unity, C#
Built modular attachment, dynamic center-of-mass and propulsion systems for a physics sandbox.

EDUCATION

B.Sc. in Computer Engineering | Yalova University *2021 - 2023*

Graduation project in fintech automation. Coursework in full-stack development, game design and network security.

TECHNICAL SKILLS & LANGUAGES

Programming & engines: C#, C++, Python, JavaScript; Unity (advanced), Unreal Engine 5 (intermediate).
